

“SPILL THE B*E*A*N*S”

Liberty Beans Crypto-Currency Whitepaper

Thesis

An alternative to the intrinsically worthless, unregistered, meme coins issued by order of Donald Trump, primarily to pad his own pocket, the B*E*A*N*S Coin is being issued to further the work of Defending Liberty & Defeating Tyranny. Along with the like-named debit card, the current value of B*E*A*N*S holdings will be fungible to dollars, for any transaction use that accepts debit cards w/o first cashing in one's coin holdings; and the full purchase prices paid during the coin offerings will be tax-deductable.

PREFACE to DISCUSSION OF LIBERTY B*E*A*N*S CRYPTO-COINS

This extended summary document about Liberty B*E*A*N*S Coins does not follow the conventional format of crypto-currency whitepapers, However, it does cover the usual subtopics of such whitepapers, most importantly the coins economic model, and Tokenomics, which describes the supply & distribution, utility & functionality, governance & sustainability of the proposed crypto-currency within its blockchain “ecosystem”. What you will not find here is the usual extensive, but poorly justified speculation and hyping of the potential appreciation of the underlying crypto-currency as an investment. Our discussion focuses on the immediate utility of Liberty B*E*A*N*S, our concern for their security and stability, and the anticipated tangible value of its asset-backed liquidity pool. That pool's value is anticipated to at least equal to the greater of the highest issuance price or the market value, by the time the coins transition to a fully fungible, redeemable and tradable market asset. In that regard, Liberty B*E*A*N*S will be a unique asset, compared to every intrinsically worthless major conventional, fiat currency, and almost every crypto-currency, especially bogus meme tokens issued solely to pad some bloated oligarch's pockets. .

As utility coins, not hyped as securities or financial investments, Liberty B*E*A*N*S price will be paid in exchange for specific rights, products & or services. Because Liberty B*E*A*N*S will be issued as utility coins, by a non-profit entity, the prices paid for the coins will be totally tax deductible. and exempt from SEC regulation, at least until they transition into a tradable market asset, which will not occur until the full initial issuance is completed. But, even then, that initial utility value of the coins, connecting the buyers to our Peers, will remain with those who retain at least 10% of their original allocation or acquisition. Among other values, both our Peers & the coins buyers, will be able to share in commissions for promoting products relevant to our democracy movement, while coins buyers will receive plus-level subscriptions to the whole family of peers, plus other benefits,. Peers will receive significant allocations of cash & coins for promoting the coins. It will be crucial that most of the nominated peers come on board, to ensure that the coins purchase is worthwhile to the buyers. But, we are confident that most nominated peers will see the benefit of promoting Liberty B*E*A*N*S, as an alternative to begging for pennies from subscribers, or having to hawk irrelevant, or even embarrassing, products of sponsors. At one time, when all currencies were backed by gold, silver or other tangible assets, but no current fiat currency has such base liquidity nor do most crypto-currencies. It is said that, when Germany's currency collapsed, it was cheaper to burn the paper money rather than firewood. With a crypto-currency, there isn't even the paper money to burn when the price collapses, as almost always happens.

In contrast, Liberty B*E*A*N*S, upon achieving full issuance as proposed, will have a liquidity pool of 100 million dollars, and expert traders will utilize our proprietary AI trading algorithms, to significantly boost the pool's value further. But, even without that trading, redemption of the pool's initial allocation of B*E*A*N*S into cash, at the final issuance price, will increase the pool's capitalization to be in excess of the total cash paid by the public coins buyers. Unlike most crypto-currencies, that are difficult to use for commerce, the Liberty B*E*A*N*S card will facilitate the universal use of part of the coins purchase price, initially for purchase of products or services, and ultimately for redemption of the coins for cash. And, there will be the potential for dividends, equal to close to half of the liquidity pool's appreciation. All of this should ensure that the coins will have significant intrinsic value that doesn't depend on luck, or the “full faith & credit” of this or that government. So, rather than puffing about the coins potential, we gladly welcome attorneys & financial advisors to compare Liberty B*E*A*N*S to all other crypto and conventional currencies, so as to verify that the virtually unheard of attributes we will build in. As the issuer of liberty B*E*A*N*S coins, Freedom Dawning will give up to right to manage the coins on a day to day basis to a new, unique blockchain. The policies & properties described herein will be controlled strictly by that blockchain & “smart contracts”. Freedom Dawning and a board of the Peers will only retain the rights to decide who will trade the liquidity pool, and who will be the custodian of that fund, and the issuer of the B*E*A*N*S card that will facilitate the coins use for commerce, & ultimately their redemption.

To facilitate the issuance, an existing blockchain may first be utilized. But, to enable the promised special smart contracts and policies, the issuance will be migrated to our own custom blockchain at the earliest possible time, also facilitating the transition to a fungible, negotiable asset. As opposed to the wasteful “mining” process of some crypto-currencies, fixed pricing for several tiers of issuance, plus multiple policies built in to the blockchain will provide the best assurance of price stability, without limiting appreciation potential. At the same time, the issuance will facilitate our peers to collaborate & support each other, rather than competing for subscribers, while begging for pennies to keep operating. These policies, along with the scheduled “burning” of a significant amount of the initial issuance, should protect buyers from the catastrophic hyper-volatility of the usual new crypto-currency. A maximum individual purchase limit, should prevent “pirates” from cornering the market for the coins and then “pumping and dumping” them. The above-referenced policies, together with real intrinsic value and utility of the coins, connecting buyers to our Peers and democracy movement, will be recognized as imparting tangible value to the coins, as opposed to the average bogus crypto-currency.

B*E*A*N*S, by the way, is our motto, standing for Be Extraordinary, and Never Settle. We're so optimistic about Liberty B*E*A*N*S Coins, that we've created a new denomination. While the issuance has no relation to China, we've chosen the Chinese word and symbol of tian, with 1 tian being equal to 100 B*E*A*N*S . That symbol was chosen because it is as easy to write as a dollar sign, in 4 strokes of a pen. It is reminiscent of a person with outstretched arms, greeting the day or the sun, and it has the meaning of the sky, and is a symbol of hope, freedom, and prosperity. That matches our belief that the sky should be the limit when it comes to health, happiness and freedom, which should not include the right to obstruct the same rights of others, that we take for ourselves. In that regard, it must be emphasized that over 97% of the proceeds of this issuance will either fund that liquidity pool, or facilitate this collaboration & sustenance of our Peers who constitute our activist movement fighting an autocratic tyranny. Peers who fight the greedy, racist autocracy seeking to destroy the very soul of our country, and world. Thus, in addition to having immediate utility and true tangible value, Liberty B*E*A*N*S will help fund this movement seeking to restore and ensure American democracy.

As just a fraction of plans for the proceeds from the issuance, an offshore women's clinic will be established, along with a TV & radio network, peopled & partly owned by our Peer bloggers. We hope this will be an alternative to the major media outlets that are being swallowed up, or intimidated, by far-right oligarchical tyrants, who are determined to limit American constitutional rights. Defense funds will be established for doctors, educators, honest news organizations & others who are being threatened by those far-right fascist monsters' who, though claiming otherwise, are traitors to the freedoms that were promised by our founding fathers. Finally, by avoiding the “mining” model of crypto creation, the issuance of Liberty B*E*A*N*S will not add to the hundreds of terawatts of electricity currently consumed by the “mining” of other coins.

We hope this introduction has peaked your interest, and we invite you to read on, to learn more about what we believe will be a unique opportunity to own a unique coin, And we hope you will recognize Liberty B*E*A*N*S as a means to support our movement seeking to restore and protect the opportunity to prosper in our country that, as the Declaration of Independence proclaimed, guarantees your rights to Life, Liberty and the Pursuit of happiness. Finally, we hope your review of this narrative explanation of our Liberty B*E*A*N*S Coins will encourage you to “spill the B*E*A*N*S”, that is, to help us spread the word about Liberty B*E*A*N*S Coins far & wide.

DON'T  **BETRAY**
ME!

LIBERTY B*E*A*N*S UTILITY CRYPTO-COINS EXPANDED SUMMARY:

Be*Extraordinary*And*Never*Settle!

We hope that you will discover that it will be a huge opportunity to buy Liberty B*E*A*N*S Coins even before they become subject to price-boosting market influence. (Pricing will be fixed at first.) Most importantly, we hope you will not confuse these coins with the usual intrinsically worthless "meme" coins or tokens...like Trump's bogus tokens, where a reported 80% of their revenue from padded Trump's pocket. In contrast, B*E*A*N*S Coins will have significant liquidity, whereas the Trump coins are backed by little more than Trump's never-ending stream of "hot air", and do not comply with SEC regulations, though they are being marketed as an investment

Because B*E*A*N*S Coins are intended to be a full alternate currency, they are being issued in a denomination called a "Tian", equal to 100 B*E*A*N*S". After conversion to be a full market asset, value will derive from demand via resales. Initially as utility coins, intrinsic value will be related solely to the rights and or services that are granted to the purchasers and the liquidity provided by the backing assets (40% of ave sales price). In addition, it will be obvious that the coins are intended to facilitate a movement to take back our democracy, as well as being a legitimate alternative currency.

An "Iron-clad" loss-proof Asset?

We think it's possible. B*E*A*N*S Coins are being issued as utility coins, which means they are, basically, evidence of a contract between the issuer and the buyers...specifically not sold as a security or investment. No promise of returns over the purchase price is implied or promised. However, as the issuance is structured, we believe there is the potential for buyers to have no down-side, by virtue of backup liquidity fund which almost all crypto-currencies, conventional currencies and stocks lack. Unfortunately, all of these "fiat" assets, by definition, depend only on faith and demand for their value ...meaning that, with low demand, they can drop in value to little or nothing at all. And, that happens often. (There is the story that, when Germany's currency value plummeted, it was cheaper to burn money, for heat, than firewood!)

With B*E*A*N*S Coins, the value will be assured by a backup liquidity pool, consisting of precious metal(s) and other currencies that can be manipulated to maintain & increase its value. Because this fund will be managed by a third party group of conservators & AI supported professional traders, the liquidity fund's value will increase, as tests of our AI trading algorithms have shown almost unheard of yields in excess of 30%...per MONTH! Thus, with coins owners being able to redeem their coins for their share of the liquidity assets, after the coins morph into a full market asset, a plummet of the coins' value, as described for conventional currencies, almost certainly cannot happen.

During the initial issuance, 40% of the prices paid for the coins will monetize the fund, and only the coins' cash buyers will be able to redeem coins (for merchandise or services purchases only) via the B*E*A*N*S Card. Working like a debit card, it will be usable anywhere a credit card is accept. After the coins become resellable on the open market, all coin owners will have the option to redeem coins for merchandise OR cash, at a ratio of the prices paid times the ratio of fund's increase in value to that original cost. The Freedom Dawning Peers, issued coins at no cost, will not be allowed to dilute the fund, as they cannot use the B*E*A*N*S Card use until mkt resale is allowed which will be after the full initial issuance at several tiers of fixed prices.

The point is that, with that ultimate redemption capability, and a rising liquidity asset backup fund via the very best traders, and without a promised upside, ironclad worth is possible, even assured...ie: minimal chance of a downside. The intent of this process is to offset market volatility with real intrinsic value, to at least equal to prices paid, with quarterly dividends to ultimately be paid to coin holders, consisting of the excess of the higher of the costs' cost or current market value. Certainly, a 100% guaranty of any asset's future value is impossible, but Liberty B*E*A*N*S provisions will support its value even more than US dollars, & differentiate them from "pump & dump" crypto-currency which often enrich a few & bankrupt many.

Regarding the intent for the initial issuance to be considered to be of non-security utility coins:

- 1) Like Bitcoin, the blockchain will be finalized prior to the coins issuance.
- 2) Also as noted, while being issued as utility coins, they are ultimately expected to be a legitimate, asset-backed, alternate currency, with units of 100 B*E*A*N*S = 1 Tian.
 - a) Note: "Tian" is a Chinese symbol, but the coins have no relationship to the Chinese government. The word was chosen because it translates to "sky", and the coins slogan is "The Sky's the Limit"...referring to the aspirations of the peers, not investment potential.
 - b) In addition, the Tian Symbol is just 4 pen strokes, making it a practical alternative to a "dollar sign", an important alternative to writing "\$B*E*A*N*S-Coin". Having such denominational recognition is important in ultimately differentiating the coins from the average crypto-currency that is backed by another, which is often little more than air and wishful speculation, like the famous Dutch Tulip Mania ,
- 3) Once the issuance commences, the issuer will not control the currency itself...all such control reverting to the blockchain, "smart contracts", third party issuer of the B*E*A*N*S Cards & conservator of the backing assets. (...however, the issuer will be responsible for the investment & capital growth of the physical assets backing up the coin, via trading by skilled individuals using their personal skills and algorithms generated by AI.)

Chart Detailing the B*E*A*N*S Coin Issuance & Pricing

BEANS Issuance Nominal Pricing, Min/Max Purchase Allocations			
Total BEANS (before "burnings")		12,000,000,000	
"Burn" after first increment of issuance sal		(1,000,000,000)	
"Burn" at time of conversion to full mkt asset		(1,000,000,000)	
Net Beans Issued		10,000,000,000	
Net Total Tians Issued (@100 BEANS)	(rounded)	天 100,000,000	Tians Sold
Nominal Price, each BEAN, initial increment		\$0.01	166,667,000

Ave Grant Value to Each Peer or Associate	46	0.37%	185,000 (Rounded)	\$925,000

B*E*A*N*S Coins vs BitCoin and crypto-tokens or conventional/"fiat" currencies:

BitCoins are created by "mining" which, simplified, consists, effectively of guessing 256 bit identifiers. As the 25 million total bit coins were mined, the mining process has specifically been made more complicated. And, the perceived value has grown exponentially as it has gotten harder to mine a single coin, more and more merchants agreed to accept bitcoins as currency, and demand/trading/reselling increases the price has also exploded. But, still, the coins are backed by nothing more than that demand. Some people think of BitCoins as a form of electricity, since the mining consumes over 100 terrawatts of electricity per year (...2% of US electric production). When first issued, a single server could mine a single BitCoin in 1 second and the coin was worth less than a penny. Now, it would take 10 years to mine a coin now trading for over \$100,000...hence, some "miners" have entire banks of servers doing the mining. Thus, the total value of BitCoins has grown from under \$200K to over a trillion dollars. At the time (early 2013) that regulatory agency finCEN created its regulations regarding crypto-currency, the value of the entire BitCoin maximum issuance was \$1.2B, representing an average value of each BitCoin was about \$48.

Conventional Crypto-Currency BitCoin Characteristics:

1. Because the Blockchain of BitCoin existed before the coins' issuance (& for other reasons, see HERE) BitCoins are not considered to be a security, though security dealers trade in them like "fiat" currency.
2. In contrast, "tokens" & "meme" coins do not have their own blockchains behind them. They utilize the blockchain technology of already established crypto-currency, like BitCoin, Ethereum and because of the nature of their issuance & management, they ARE considered securities...though, as you would expect, Donald Trump ignores regulations and has refused to register his bogus crypto-coins.
3. As noted, BitCoins are mined, not sold out of an original issuance; and the price was not fixed...only varying based upon demand and the difficulty of mining the coins.
4. Like the majority of crypto-currencies, most of them are backed only by demand, or a relatively tiny amount of liquidity that usually consists of only the crypto-currency whose blockchain they use. It's like backing up some oxygen gas with nitrogen gas!
5. While it is possible to sell BitCoins privately, the bulk of them are sold via securities dealers that require licensing with the SEC & FINRA (in the US). A private seller is prevented from publicly marketing the coins they want to sell.
6. BitCoins were immediately resellable on the open market when they were/are created.

...In total contrast, Liberty B*E*A*N*S Crypto-Coins:

7. Are to be based on its own blockchain. If, for speed, the initial issuance is via an existing blockchain, the issuance will be attached to a new unique blockchain as soon as is feasible.
8. Upon initial issuance, B*E*A*N*S Coins will be "utility coins" (effectively coins that are evidence of a contract for rights, goods or services) no license is required in order for Freedom Dawning Peers (who receive B*E*A*N*S Coins at no cost to themselves) to promote them, provided they are not promoted as securities/investments and gains/appreciation is not promised. (That right will expire at the time the coins convert to a full market asset, and Peers are prohibited from redeeming or reselling their own coins prior to that time.)
9. As noted above, B*E*A*N*S Coins will be backed by a liquidity fund consisting of precious metal(s) and conventional currency, as well as redeemed coins, which fund will be boosted in value via AI generated trading algorithms.

10. Pricing of B*E*A*N*S Coins will be fixed during the initial issuance, increasing during each of the 2nd & 3rd tranches sold. This is anticipated to equate to an average of \$5.00/Tian (our new currency denomination, equal to 100 B*E*A*N*S each).
11. Once the entire issuance is sold, the coins will be resellable on the open market, or redeemed via the B*E*A*N*S Card for the lower of the adjusted cost ratio or open market price.
12. After the initial issuance is sold, and the coins become resellable & redeemable for cash, dividends will be paid on a quarterly basis out of the liquidity pool, provided that the pool value exceeds the adjusted cost or market value of the issued coins, whichever is higher. The dividend will be paid, based on the lower of the number of coins owned on the ex-dividend date or the average number of coins owned during the prior 90 days, by dividing that excess between the coin owners who own coins on the ex-dividend date. If desired, the dividend can be paid in additional coins, at the current market value, with fractional tians paid in cash. At this point, the coins will constitute a negotiable currency as well as an investment fund, though no assurance whatsoever is speculated on at this time in regard to likely returns.

AI was asked if the Liberty B*E*A*N*S Plan is a feasible model

Question to AI: What are your thoughts on launching a the crypto-currency in which

1. the original issuer is a specific non-profit entity, but
 - a. the management is decentralized and the purchase is considered to be a contribution to the non-profit issue rather than a speculative investment, and
 - b. the purchase, as demanded by the definition of a "utility" coin, also buys certain rights & benefits.
2. Part of the purchase price is used to purchase other fiat currency or precious metals with which to back the new crypto-coins
3. A debit card issued to the crypto buyers, which could convert the crypto back to cash from the backing funds, but only for use for purchases of merchandise by the crypto owner, and not for cash or an amount in excess of their purchase price or the adjusted cost ration noted above. (A question is in regard to who would be the custodian of those liquidity backup funds?)
4. After all of the issued crypto-Currency has been sold, convert the crypto-currency into a full decentralized market asset, with the being restricted from that referenced redemption prior the conversion to a market asset.
 - a. This restriction would also apply to peers of the issuer who will be given coins are no cost.

AI's RESPONSE:

Issuing a utility crypto-Currency under the model you describe is a complex but potentially feasible idea. It combines elements of decentralized finance (DeFi), non-profit fundraising, and asset-backed stable coins. Below, I'll break down the key components of your model, address the challenges, and provide insights into how it might work.

If executed well, this model could provide a novel way for non-profits to raise funds while creating a utility crypto-Currency with real-world use cases. However, it would require significant expertise in blockchain technology, legal compliance, and community management.

1. Non-Profit Issuer and Decentralized Management

- **Feasibility:** It is feasible for a non-profit entity to issue a crypto-Currency as a utility token, where the purchase is framed as a contribution to the non-profit's mission rather than a speculative investment. This aligns with the concept of "impact tokens" or "charity tokens," where the primary purpose is to support a cause rather than generate financial returns.
- **Decentralized Management:** Decentralized management can be achieved through a decentralized autonomous organization (DAO) or similar governance structure. The non-profit could initially set up the governance framework and then gradually transfer control to the community of token holders.

2. Asset-Backed CRYPTO-Currency

- **Backing with Fiat or Precious Metals:** Backing the crypto-Currency with fiat currency or precious metals (e.g., gold) would provide stability and reduce volatility, making it more attractive for everyday use. This is similar to how stable coins like USDC or PAX Gold operate.
- **Debit Card Integration:** Issuing a debit card that allows users to convert the crypto-Currency into cash or spend it directly is feasible. Companies like Crypto.com and Wirex already offer such services for existing crypto-Currencies.
- **Custody of Backing Assets:** In a decentralized system, the backing assets (fiat or precious metals) would need to be held by a trusted custodian or a smart contract-controlled reserve. This custodian could be a regulated financial institution or a decentralized protocol (e.g., MakerDAO's model for DAI). Transparency and regular audits would be critical to maintain trust.

3. Limiting Purchases to the Issuer Initially

- **Feasibility:** It is possible to restrict initial purchases to the issuer by using a whitelist or a smart contract that only allows transactions with the non-profit's designated wallet. This ensures that the non-profit retains control over the initial distribution and pricing.
- **Preventing Resales:** To prevent resales during the initial issuance phase, the smart contract could lock tokens until the issuance is complete. Alternatively, the tokens could be non-transferable until a specific date or condition is met.

4. Transition to Full Decentralization

- **Feasibility:** Once all the crypto-Currency has been sold, the non-profit could relinquish control by transferring governance to a DAO or similar decentralized structure. This would involve:
 - Distributing governance tokens to the community.
 - Setting up voting mechanisms for decision-making.
 - Ensuring transparency in the transition process.
- **Challenges:** The transition to full decentralization requires careful planning to avoid power imbalances or governance issues. The non-profit would need to ensure that the community is adequately educated and engaged in the governance process.

5. Regulatory Considerations

- **Securities Laws:** If the crypto-Currency is marketed as a contribution rather than an investment, it may avoid being classified as a security. However, regulators (e.g., the SEC in the U.S.) will scrutinize the token's structure, marketing, and functionality to determine its classification.
- **Tax Implications:** Contributions to the non-profit may be tax-deductible, but the issuance and use of the crypto-Currency could have tax implications for both the non-profit and the users.
- **Anti-Money Laundering (AML) and Know Your Customer (KYC):** The non-profit and any associated platforms would need to comply with AML and KYC regulations, especially if the crypto-Currency can be converted to fiat via a debit card.

6. Who Would Hold the Backing Assets?

- In a decentralized system, the backing assets could be held in a multi-signature wallet controlled by a group of trusted entities (e.g., the non-profit, community representatives, and a regulated custodian). Alternatively, a decentralized protocol could manage the reserves using smart contracts, with regular audits to ensure transparency.

7. Challenges and Risks

- **Trust and Transparency:** Ensuring trust in the system is critical, especially regarding the custody and management of backing assets.
- **Volatility:** Even with asset backing, the crypto-Currency could experience volatility if the backing assets fluctuate in value (e.g., gold prices).
- **Regulatory Uncertainty:** CRYPTO-Currency regulations are still evolving, and the model could face legal challenges depending on the jurisdiction.
- **Adoption and Liquidity:** Achieving widespread adoption and ensuring liquidity for the crypto-Currency could be challenging, especially during the initial phases.

Summary/Conclusion:

Your model is feasible subject to careful design, legal compliance, and community engagement. Key steps include:

1. Structuring the crypto-Currency to avoid classification as a security.
2. Partnering with a trusted custodian for the backing assets.
3. Developing a robust governance framework for decentralization.
4. Ensuring that the background blockchain technology is comprehensive in regard to "smart contracts", security, etc.
5. Ensuring transparency and regulatory compliance at every stage.

Details of Proposed Policies, to be Built Into “Smart Contracts”:

Because the coins may not be resold during this interim period, and redemption via the B*E*A*N*S Card, limited to purchases of merchandise or services (not cash advances) will be limited to about 40% of the price paid for the coins. Because they cannot yield a profit, the coins should not be considered an investment or security, as defined by the SEC. Prior to conversion to be a fully fungible market currency, absolutely no estimate or promise is being made regarding potential future profitability. Both our Peers and public coins buyers receive benefits from their coins purchases, including supporting defenders of freedom as well as being able to take a tax deduction for their purchases, by virtue of the issuer being a non-profit entity.

Before the sale of initial issuance and conversion to a fully fungible mkt asset, the individual allocations to Freedom Dawning Peers will consist of shares of the B*E*A*N*S Coin, cash from the sale of the coins, and the right to receive commissions on the sale of B*E*A*N*S Coffee (equal to 25% of the excess of price over wholesale cost), 40% of which commission will be paid to referrers for same, if those referrers have purchased the coins. Each peer will receive a link which will bring up a B*E*A*N*S page is personalized for them, and coffee purchased thru them will include the peer's name on the labels, and will be drop-shipped to the buyers w/ no shipping charge, no minimum purchase. Peers & any others receiving allocations of B*E*A*N*S Coins, at no cost to themselves, will be prohibited from reselling or redeeming the, or using them for purchases (via the B*E*A*N*S Card) until the coins are converted from utility coins to full market assets.

Coins purchased for cash, however, will be redeemable via the B*E*A*N*S Card for general purchases up to a ratio of 40% of their coins purchase in dollars, provided that the liquid backing asset(s) have not dropped in value. The conversion rate shall be adjusted by multiplying that ratio times the ratio of the current backing asset value to its liquidity backing basis, and less the B*E*A*N*S Card svc fee which is anticipated to be a maximum of 2.5% of the price of goods purchased. Until after conversion of the coins to a fungible mkt asset, the coins may not be sold on the open market, and cash advances will not be available via the B*E*A*N*S Card. Because the initial coins purchases will be from a non-profit issuing entity, the purchases prices will be tax deductible (...though redemptions via B*E*A*N*S Card purchases will likely be treated as ordinary income for tax purposes).

Freedom Dawning Peers as Recipients of B*E*A*N*S Coins:

Again, the express purpose of the issuance of B*E*A*N*S Coins is to fund Freedom Dawning and several dozen Peers in their fight to Defend Freedom & Defeat Tyranny in the US and elsewhere. Peers Freedom Dawning is soliciting to become our peers are specifically those entities or individuals with blogs, websites or Yahoo video blogs which are among the most fervent in their opposing to the trump takeover & dismantling of the US government in favor of oligarchs and against the interests of the rest of American workers. Freedom Dawning makes no excuses that not invited to be peers are those, often mainstream media, and other, outlets that are “bending a knee” to this current Trump insurrection, or who either rationalize or make excuses for this lifelong grifter & criminal. Here are the Peers to be invited & provisional advisory board & promoting team:

It is important to note that B*E*A*N*S Coins are utility coins (effectively evidence of a contract for products &/or services...not bogus “meme” coins or tokens).

Our Peers, who must promote the coins, are to be awarded cash & Liberty B*E*A*N*S Coins, at no cost to them, in exchange for:

1. Being granted the rights to receive commissions for marketing/selling B*E*A*N*S (Be Extraordinary And Never Settle) Coffee, with the bags incorporating their name, via custom web sites they are provided with;
 - a. Commission will be approximately 50% of the difference between the wholesale & retail price (which includes shipping & tariffs); (ie: up to \$6.00 out of a \$30 purchase); &
 - b. 40% of which commis they agree to pay to to B*E*A*N*S Coin members who refer coffee purchasers (ie: \$2.40 in this example).
2. Being granted the rights to get a commission of 25% f(over \$60) for promoting a practical course on representing yourself in court. This is the only course of its kind, written by a highly successful attorney. And, it is of great worth even if one wants to know if their attorney is competent and doing what they should be during for their client. (With knowledge of importing & many contacts,

3. Being granted the rights to commissions for referring borrowers of “fix ‘n flip” loans to rehab homes that must be resold to owner-occupants;
4. Being granted the right to receive commissions for promoting other items that are relevant to our movement, ...rather than promoting dildos, unproven supplements and all manner of other dubious products in order to fund their activities.
5. The coins & share of cash from the coins sales as contributions are intended to support their work in furthering democracy. After conversion of the coins to a market asset, Peers & Peer Board Members will receive a tiered annual compensation consisting of a percent of the annual appreciation of the liquidity fund, as long as they retain at least 10% of their original coins grant. In exchange for their initial coins and cash receipts, and this future compensation, all Peers will continue to promote the coins. And the Peer Board Members will have the responsibility to monitor & choose the traders & custodian of the liquidity pool & B*E*A*N*S Card issuer.
6. For steering public coins buyers to the coins sales site the “Starred Influencers” will receive over \$1,000,000 each, and the other Peers will receive over \$800,000 each;; and, which defines the cryptocurrency as “utility coins”
 - a. Peer must agree to refer potential coin buyers to the primary link and not make promises in regard to the value of B*E*A*N*S coins as an investment prior to complete sale of the issuance, at which time the coins will transition to a fully fungible & resalable market asset; and
 - b. While B*E*A*N*S Coins are to be specifically structured to pass the “Howey Test”, and classified as a contribution, and not a security, at the time of issuance, Peers marketing efforts must comply as if the coins are being issued pursuant to “Regulation A”, for which a 1% referral fee will be paid (until full conversion to a market asset & sales/resales by licensed brokers); and
 - c. Peers must:
 - i. welcome coins buyers as upper level subscribers to their website/blog, w/ more intimate contact ability, & lower level subscribers, without them being required to pay Patron or other membership fees; and
 - ii. agree an enhanced level of contact, as desired by each buyer; and
 - iii. agree not to sell the subscribers contact information w/o their permission.
7. Peers are welcomed to the Freedom Dawning Network where their work is publicized and they can collaborate with others in furthering the cause of freedom & democracy. Peers will have secure access to the schedule page where they can post the goals and schedules of their blog posts, videos, conference “calls”, etc. (Peers will be encouraged to set up their blogs so as, to the extent possible, to provide an ad-free environment for coins-buyer members, & not dun them for more money.; (Imagine the potential to get 10’s of millions of petition signers, class action participants, protestors, by collaborating rather than competing with each other, for subscribers).
8. Unlike the public coins buyers, Peers will be restricted from redeeming their coins for merchandise purchases, via the B*E*A*N*S Card, until the coins become a full market asset;
9. Peers will be protected by a significant legal fund intended to fight illegal retaliation against their First Amendment rights by the corrupt DOJ or others;
10. While not mandatory, Peers will be encouraged to be non-profit, requiring a public income statement that details the disposition of their earnings;
11. The management of the currency will primarily be via a decentralized DAO build into the blockchain, but Freedom Dawning Board Member Peers will select or reconfirm the liquidity traders, the B*E*A*N*S Card issuer & custodian of the asset liquidity fund, as well as vote on allocation of another large fund intended to fund other activities of our Peers..

Examples of potential annual commissions:	
\$18,250	B*E*A*N*S Custom Coffee referrals, @\$5, 10/day
\$13,000	Mad Liberty Custom Bulova Watch (@\$150) \$25 10wk
\$31,200	Self-help law course: 25% (\$240) \$60, 10/week
\$46,800	Credit Repair Service: 20% (\$900) \$180 commission, 5/week
\$18,200	Mariner Med (when launched) Clinic Referral; 2/day @\$25
\$16,380	Mariner Medical Retail 1 wk cruise referrals; 3/wk @\$105
\$86,400	Rehab mtg commissions, 4/month; 1%, \$180K mtg, \$250K price
\$240,000	\$1MM Fix n' Flip Line of Credit, 2/month, 1%, 6x\$200K mtgs each
\$470,230	Commissions if all of the above sales were achieved

Persons/Entities Nominated to be Freedom Dawning Peers & Bd Members:

Frankly, Peers a chosen, from the thousand of bloggers, if the meet the tests of being the most outraged by the rise of extreme, even fascist governments around the world, including the US. Peers do not include those media outlets that merely report the news, or who make excuses for oligarchs, MAGA (...make America Grotesque Again), "kleptocrats" and so on. Our Peers will be those who offer actual resistance to the rise of fascism, and actively promote resistance to those who are stealing all of the wealth of the nation, while impoverishing everyone but themselves, while banishing the civil rights and the Constitution. To put it bluntly, our Peers are the most "PO'd" activists who are most able to provide specific plans for this resistance to fascism & kleptocracy. Peers will have access to a Freedom Dawning legal fund if their 1st Amendment Rights are infringed up by the Trump regime; as well as a large general fund to further support their work, which will be allocated via decision of the Board (See hereinafter Freedom Dawning allocations), & wi;; choose the liquidity pool custodian/traders, and issuer of the B*E*A*N*S Card::

Public, non-Peer. buyers of B*E*A*N*S Coins:

- 1) Get the benefit the coins purchase being tax deductible because the issuer, Freedom Dawning is a non-profit entity;
- 2) Will receive a pocket copy of the US Constitution, Declaration of Independence and UN Universal Declaration of Human Rights; a copy of On Tyranny by Timothy Snyder; 2 Guy Fawkes masks for public protest anonymity; and a physical gold & silver plated B*E*A*N*S memento coin (not redeemable);
- 3) Will be issued a special B*E*A*N*S Card which acts like a debit card for merchandise purchases, without the merchants having to authorize the use of B*E*A*N*S Coins as currency. The card will be tied to their B*E*A*N*S Coin "wallet", automatically converting their coins to cash, adjusting the value as explained above. As noted, the conversion rate will adjust as the backing liquidity asset value increases.
 - a) Prior to reversion of B*E*A*N*S Coins to a mkt asset, the maximum conversion rate will be limited to the price paid for the coins, as payout of more than that could make the coins an investment/security.
 - b) The coins may not be resold on the open market until the referenced reversion nor, prior to that time, cash advances via the B*E*A*N*S Card will not be permitted. These limitations are necessary because the card issuer is also prohibited from reselling coins until the total initial issuance has been sold.
 - c) After transition to a full mkt asset, coins may be redeemed via the B*E*A*N*S C at the ratio noted above; and will have the right to receive dividends as noted in the white paper...anticipated to be a minimum of 10% of the price paid for the coins.
- 4) Upon INITIAL ISSUANCE:
 - a) Coins purchasers gain upper level subscriber access to all Freedom Dawning websites/blogs at no cost above their coins purchase price. To avoid being overloaded with contact emails, and so on, a special page at Freedom Dawning will allow the coins purchasers to specify exactly how much contact they desire from each peer. Plus, a special schedule page with notify the buyers of when each peer has uploaded, or will be upload, new blog content; scheduling members conferences, etc; and
 - b) They will have free entry to all peers conference calls or members-only blogs; and special access to the peers via private service software and even, potentially, via phone;
 - c) They can request free "march" from any or all peers, up to a value of \$20/peer (excl shipping, which would generally buy a hat, t-shirt or coffee cup);
 - d) Also as noted, each Peer will pay a portion of their commission to each coins purchaser who refers a retail coffee buyer, & potentially other referrals. Their referral code will be the same no matter which peer's website receives the order, but the labeling of the coffee will reflect the receiving peers name.
- 5) Upon coin sales having reached a certain threshold, coins buyers will receive a B*E*A*N*S Coin, as noted in the public coin buyer's section, below (physical coin is a memento only, not redeemable for cash).
- 6) NOTE: All of the above benefits apply during the initial coins issuance, & are unlikely to accrue to public resale buyers of the coins once they have become a resalable market asset.
- 7) Neither commissions paid for coffee purchase referrals nor the value received as merchandise via the B*E*A*N*S Card reduce the amount of tax deduction from the initial purchase price as the redemption comes out of the assets backing up the coins. It does not reduce the amount of the original contribution. However, those commissions & value of merchandise receive are likely to be treated as ordinary income.
- 8) If, after the coins are converted to a marketable asset, a coin buyer choose to donate any or all of their coins to any or all of the Peers, or another non-profit entity, they may be able to take a second tax deduction equal to the then current market value of the coin(s). These comments...and, in fact, this entire document...must not be considered financial advice, and is something to discuss with a certified financial advisor.
- 9) The various benefits & rights granted to the initial issuance coins buyers will continue as long as those original buyers own their coins. But, they will expire upon resale of the coins, and will NOT be extended to buyers when they are allowed to be resold.

The above representation is of a B*E*A*N*S Coffee Pricing & Commission example. Note that the cost of shipping is being absorbed by us, as well as the abusive Trump tariff: Liberty B*E*A*N*S Coins are specifically not being issued as a security. As noted above, the issuance is of utility coins, with all of the regulatory exemption such coins warrant. And, until full issuance is achieved, and the coins are converted to a full resellable asset,

The issuance is specifically being structured to allow sale that is exempt from SEC & FINRA regulations. However, after the full issuance is sold, the intent is for the coins to be a literal alternative to conventional currency, and even better than such "fiat" currencies by virtue of being backed and at least partially fungible with precious metal & or assets. At that time, redemptions and resales will be handled by licensed dealers and promoting of the coins by Peers will mostly be limited to very basic facts and referral of prospective buyers to a single primary coins website, though, not being a security, commissions may be payable for those referrals..

The issuance will "pass" the Howey Test, described as follows. The Howey Test, used to determine if a transaction qualifies as an "investment contract" and therefore a security, consists of four parts: an investment of money, a common enterprise, an expectation of profits, and the profits must be derived from the efforts of others; all four elements must be present for a transaction to be considered a security under this test.

Breakdown of the four parts of the Howey Test:

- **Investment of Money:** This simply means that the investor must put actual money into the venture.

- **Common Enterprise:** This refers to a situation where multiple investors pool their money together into a shared project, meaning their success is linked to the overall performance of the venture.
- **Expectation of Profits:** The investor must reasonably expect to make a profit from their investment.
- **Derived from the Efforts of Others:** The primary source of the investor's profits must come from the efforts of a promoter or other individuals managing the project, not from their own personal work.

Key points to remember:

- **Strict Interpretation:** All 4 elements of the test must be met for an investment to be considered a security.
- **Application to CRYPTO-Currencies:** The Howey Test is often used to determine if a crypto-currency qualifies as a security, with debate arising over whether certain crypto-Currencies meet all four criteria.
- **SEC Jurisdiction:** If an investment is deemed a security under the Howey Test, it falls under the regulatory jurisdiction of the Securities and Exchange Commission (SEC)

Sale/Resale of the Coins Before & After Conversion to a Market Currency, and Annual Peer Compensation:

Prior to full sale of initial issuance and conversion to a fully fungible mkt asset, the individual allocations will be redeemable (for merchandise/services only, not cash) up to the above ratio (as adjusted) via the B*E*A*N*S Card, provided that the liquid backing asset(s) have not dropped in value, or the price paid, whichever is less.

In using the B*E*A*N*S Card, the user will be exchanging their B*E*A*N*S for an effective line of credit at the exchange rate, less whatever nominal service fee is charged by the actual B*E*A*N*S Card issuer that is also the conservator of the liquidity assets. No other access to the liquidity assets except by the referenced traders...

That exchange rate shall be adjusted by multiplying the above ratio times the ratio of the current liquidity/backing asset value to its purchase basis during the sales by the issuer. Because the liquidity assets will be traded by experienced traders using AI generated algorithms, there is great potential for the liquidity to increase significantly, even to exceed price paid.

As noted above, to avoid liability of the coins being deemed a security, the coins will not be marketed based on the potential of gain in excess of the price paid. Rather, the redemption exchange rate shall be limited to a maximum of the price paid until sale of the full coin issuance is accomplished. And, until the coins convert to a full market asset, they will not be resalable on the open market or exchanged for cash using the B*E*A*N*S Card. That applies to both the coins buyer and the manager of the liquidity assets, which accomplishes the exchange of coins for purchase credit via the cards.

During the interim period, the B*E*A*N*S Coin Peers will be able to promote the coins without mandate to be licensed securities dealers, provided that they do not offer the coins as securities or investments. And, it appears that commissions can be paid to the Peers for that promotion, as those commissions will effectively be just referral fees paid by the single central entity actually selling the coins.

PROVISIONAL FIGURES ILLUSTRATING INITIAL ALLOCATIONS TO PEERA, AS WELL AS ANNUAL PAYMENTS AFTER TRANSITION OF COINS TO A FULL MARKET ASSET:

INITIAL & POTENTIAL ANNUAL CASH TO PEERS, ETC		Annual Examples	
As a % of Liquidity Fund Appreciation, etc			
\$250,000,000	Orig. Issuance Cash	144%	Presumed Annual Appreciation
\$100,000,000	Liquidity Pool, start	\$144,000,000	
12.0%	Presumed Total % of Liquidity Fund Appreciation, per month	2.00%	Annual base pmt to all Peers
		\$2,880,000	
INITIAL CASH FOR PROMOTING COINS:		40	Peers
\$1,000,000	*Starred Peers (Bd Members &/or +1MM YouTube Subscr)	\$72,000	Per Peer*
\$818,000	Other Peers	0.5%	Additional Annual pmt to all Peer Bd Members*
\$409,000	OTHER PAID ADVISORS, PROMOTERS & ORGANIZATIONS	\$720,000	
\$100,000	Consultants & Political Advisors, Personalities, etc	15	Board Members
10.00%	Good annual dividend to coins buyers	\$48,000	Annual Pmt Per Board Member*
25,000,000	Appreciation needed to pay out dividend on max cost to all coins owners	4.0%	Commissions to Liquidity pool Traders & Custodian
19.9%	% of appreciation for dividend, costs & annual Peer bonuses	\$15,520,000	
99.9%	Net annual liquidity pool appreciation	\$19,120,000	Ttl Trader, Custodian & Peer Annual Pmts
\$99,880,000	Appreciation remaining to supplement liquidity pool		
<p>Above example presumes that a max of 50% of liquidity pool trading appreciation goes to dividends, costs & peer bonuses</p> <p>The above example would also facilitate a liquidity pool adequate to allow cash redemption of all coins at max issue price & pay dividends & costs</p> <p>While referencing an annual period, the goal is to achieve this appreciation during the time required for full initial issuance of the coins, likely to be under 1 year</p>			

While the initial issuance will not permit resales of Liberty B*E*A*N*S until full these is the potential for options to be offered. Investigation is in progress to determine whether options on our coins will void the exemption from SEC regulation of the coins as utility coins. Not all exchanges sell options on crypto-currencies, but a number of them do so. These options must not be offered with accompanying hype regarding potential for profitability...which would contradict their issuance solely as utility coins. But, if the options can be offered without any assurance of hype regarding that potential, then such options may be available.

While not being issued under Regulation A, Peers will be encouraged to follow the general provisions of the regulation in regard to promoting the coins (such as not promising gains, not actually being the coins seller, and referring potential buyers to the central seller and a single coins web-page). By agreeing not to discuss or promise investment potential (current or future), Peers will not be prevented from discussing the characteristics & benefits of B*E*A*N*S Coins as utility coins. After the full coin issuance is sold, resales may be required to be handled by securities dealers, and Peers should take care not to offer financial or investment advice that requires licensing. (The potential for them to receive commissions on resales is minimal anyway.)

Because of the above limitations, it will be impossible for the backup fund to run out of assets via B*E*A*N*S Card redemption requests...though, theoretically, the liquidity balance could drop to zero prior to conversion to the market asset, if every coins buyer redeemed their holdings for product/services purchases, which, of course, is unlikely.

After the coins become a market asset, both coins owners and the manager/custodian of the backing liquidity assets will be able to resell the coins on the open market, it is being considered whether a minimum hold time (say, 30 days), even for a short period after conversion to a market asset, may be required in order to stabilize volatility. This will mean that likely, even ignoring gains achieved by expert trading, using AI algorithms, of those assets, average total liquidity will tend to stabilize at, but be less volatile than, the average market value. Owners of the coins will have the option of selling them on the open market, or redeeming them for cash or purchases using their B*E*A*N*S Card. To avoid the liquidity fund being depleted, the redemption ratio will be the lower of the market price or the above ratio, in dollars. Via trading, the liquidity fund is likely to appreciate by at least 60%.the initial fund from full issuance. 50% payout of 60% appreciation on the starting liquidity fund would be adequate to provide nearly an 11% dividend return to the buyers, as well as paying the Peers & Peer Board members their promised annual returns. In fact, because the liquidity fund will start with 1 Tian in coins for each \$5 of cash, if those coins are ultimately redeemed for cash at the maximum issue price, the liquidity fund will exceed the issuance prices paid by \$50K, disregarding trading income.

What is most important is that B*E*A*N*S Coins will be a true currency with more intrinsic value, and fully fungible, by virtue of that asset-backed liquidity...better than fiat currency backed by nothing more than "faith". Even if the open market price drops, the only way the coins could be devalued if backing asset lose value. The goal is to maintain a true asset backed liquidity equal to the market price, unheard-of for crypto-currency.

Because some limited reservations of management of the currency will be retained gy the Freedom Dawning board (ie: choosing liquidity fund traders; liquidity fund custodian & B*E*A*N*S Card issuer ad any costs of peer collaboration, some annual compensation is appropriate, in addition to the initial allocations paid for promoting the coins. Here is a provisional summery of these payments, as projected based on a full sell-out of the coins.,

LIKELY UNIQUE VIEWERS EXTRAPOLATED FROM ACTUAL PEERS' SUBSCRIBER NUMBERS:

<i>Extrapolation of Likely Actual YouTube Viewers of Freedom Dawning nominated Peers & advisors</i>	
39,050,650	subscribers of nominated Freedom Dawning Peers/advisors
10	presumed multiple subscriptions each
3,905,065	unique subscribers
4.0%	subscribers vs viewers
25.00	viewers per subscription
97,626,625	likely actual total viewers
100,000	Viewers needed to sell out Coins at minimum purchase cost (\$2,500)
50.0%	% of viewers who see coins promotion
0.20%	% of min cost viewer-buyers needed for sell-out

In considering to issue Liberty B*E*A*N*S, the potential for the coins to sell out is something that is appropriate to project. In doing so, it makes sense to presume that the poll of most likely buyers consists of those persons who are already viewers of of the blogs of the entities nominated as Freedom Dawning Peers. Depending upon whether one assumes the buyers are of the maximum or minimum purchase limits, the number of buyers needed for a sell-out ranges between 500 and 100,000 buyers. In comparing that larger number to an extrapolation of the number of likely unique blog viewers, it is apparent that sell-out would occur if one tenth of 1% of the viwers become buyers of the minimum coin issuance limit. We hope you agree that this is not a "pie in the sky" projection, considering the great effort that is being expended to provide Liberty B*EA*N*S with legitimate and tangible value:

Proposed Disposition of Freedom Dawning's B*E*A*N*S Coin Receipts:

Freedom Dawning will totally refrain from demanding that its Peers spend their share of B*E*A*N*S Coins receipts in any particular, except to expect that the spending meets our slogan: DEFEND LIBERTY, DEFEAT TYRANNY. Hoeven, Freedom Dawning itself, intending to retain a significant amount of those receipt, is happy to reveal its intended us of those receipts:

Freedom Dawning Proposed Allocation of Liberty B*E*A*N*S Coin Anticipated Receipts		
Mariner Medical		\$8,900,000
	Launch Offshore Womens Clinic, w/ Gulf Cruises, out of control of oppressive "red" states	
	Purchase/Rehab Second Vessel for Above	\$5,800,000
Legacy Hospitality Academy		\$8,900,000
	Establish Affordable Hospitality Academy for the 80% of workers underserved by colleges	
NewGene USA Startup Fund		\$3,000,000
	Learning from the huge prices for PPE, tests, experienced by NW states during the Covid pandemic, due to competition with wealthy NE states, this fund would establish a facility in OR or WA producing affordable masks, HOCl & a proprietary profilactic nasal inhalant; & importing bulk tests for respiratory & other illnesses, respirators & O2 generators	
Freedom Dawning On-Air Network		\$11,950,000
	Dollar figure cost of a Phila TV and FM station that reaches Atlantic City; has ATSC3.0 capability; plus equipment & shared facilities to reach the NYC area; plus 1 years operating funds. To be employee-owned with bloggers being a big part of on-air staff. Potential to join cable network, such as DirecTV, etc.	
Flight for Freedom Fund		\$3,500,000
	To provide matching funds to communities providing refuge to women, doctors, teachers, etc fleeing oppressive "red states"-	
Freedom Fund A, Judicial Support		\$3,500,000
	Provide litigation support funds for individuals &/or organizations. AND OUR PEERS fighting for individual, environmental, womens, immigration & other civil rights in response to MAGA persecution; funds to provide student access to banned books and a free press unhindered by censorship or SLAPP suits	
Freedom Fund B, First Amendment Defense		\$3,500,000
	Provide matching funds to smaller news organizations & PBS seeking to fight persecution by the Trump Regime.	
Freedom Fund C, Whistleblowers, Voting & Civil Rights Defense		\$3,450,000
	Provide funds to whistleblowers & investigation regarding Trump violations of voting & other civil rights, his constitutional oath, etc.	
"ProDOT" (Proclaim Liberty, Defeat Oligarchy & Tyranny) Fund		\$11,600,000
	Seed money for a fund to support progressive candidates in local battleground campaigns, support Indivisible & other grassroots organizations	
Rehab America Fund		\$3,500,000
	Profit-sharing home rehab fund for small rehabbers who agree to sell their rehabbed prperties only to owner-occupants	
Take Back Our Community Fund		\$3,400,000
	No-Interest Loan Fund supporting HOA members in dire financial distress & litigation support to fight rogue boards	
Oversight Expense Includng Freedom Dawning & Mariner Medical Legal Defense		
Misc Costs & Advisory Oversight	2.5%	\$2,500,000
Executive	2.5%	\$2,500,000
Fight-Back Peer Grants, per Freedom Dawning Board		\$12,000,000
Other & Future		\$12,000,000
TOTAL ALLOCATIONS		\$100,000,000

FREEDOM DAWNING INTENTIONS to FACILITATE PEERS COLLABORATION IN PROMOTING DEMOCRACY, DEFEATING TYRANNY:

- A. Create & issue Liberty B*E*A*N*S utility crypto-coins, with like-thinking Peers we choose receiving both cash and coins, without cost, in exchange for promoting the coins & B*E*A*N*S Coffee, & agreeing to provide benefits to coins buyers. (Because the coins are of the “utility” variety, they are not securities and promoting them, with a few limitations...like not promising appreciation...does not require licensing until the coins revert to a full market asset/currency.) The coins to be asset-backed, which assets will be traded by experts, using AI algorithms, to increase the assets value exponentially to meet or exceed the higher of market value (once the coins become a mkt asset) or the total issuance price. This will make the coins more secure even than every major world fiat currency...back only by sometimes suspect “faith & credit” of the related governments. Once the background blockchain is created, and the coins launched, the coins’ policies will be facilitated by “smart contracts” with assets managed by a third-party conservator, all out of the direct control of Freedom Dawning, facilitating the coins not being labeled as securities by the SEC, finCEN or FINRA. The blockchain structure will also facilitate this, but will provide for the coins to convert to a full, resellable, market asset after all, or a major part, of the initial issuance is sold. The ultimate goal is for this to be a loss-proof currency, but with a potential “upside”.
 - a. For agreeing to collaborate with, and promote, other Peers, and the coins, each will receive a huge cache of the coins and an average of \$1MM dollars in cash, by the time the coins issuance sells out...at NO cost to the Peers;
 - b. Provide a continuing annual fee to Peers as long as they continue to own at least 10% of their original coins allocation.
- B. The incoming funds allocated to the Peers and advisors will support a major collaborative effort to take back our country from fascist oligarchs seemingly aimed only at starving everyone else! The monies Freedom Dawning retains will support that effort, as detailed elsewhere herein, including the purchase of a TV & radio station which will be peopled mostly by these Peers, who will also have an ownership interest.
- C. Upon transition of the coins to a full, resellable market asset, provide the Peers with the ability to trade their shares for cash or merchandise via a B*E*A*N*S Card, the will appear to work like a regular debit card, more than doubling the cash value of their allocation. Unlike virtually every other intrinsically worthless crypto-currency, B*E*A*N*S Coins will start out with 40% of the issue cash backed by cash & other assets (ie: silver or gold, etc), which will be exponentially increased via investment of the liquidity fund, under the control of expert traders using proprietary AI generated algorithms. This will facilitate the payment of dividends to the coin owners. Tests indicate potential monthly appreciation of over 30%/month, but 5% monthly appreciation would facilitate payment of over a 10% annual dividend to coin owners, as well as the annual payments to coin owners, presuming 50% of the appreciation goes to the liquidity pool.
- D. While B*E*A*N*S Coins are specifically NOT sold as an appreciating asset or security (to avoid SEC & finCEN regulations, as noted above), but, ultimately, and after the coins transition to a full market asset, coins will be redeemable for cash, as well as products/services. be exchanged. The conversion rate will be based on the ratio of the cost, as appreciated, to the highest issue price, using the card. Or, the coins may be sold on the free market, which will be prohibited until the full issuance is accomplished. In effect, the coins will turn into a loss-limited investment...with an upside, but a limited downside. This will be an unusual situation in which the coin prices buyers pay will be tax deductible, while coins redemption will not reduce the amount of the base amount they can deduct. Again, it is important to note that, while there are a very few crypto-currencies that do have true liquidity, NONE of them have virtually all of the sales income going to non-profits.
- E. Create the mechanism to take advantage of the YouTube site, such that when a public buyer acquires the coins, they, in return, are automatically subscribed to all Peers, and a “+” level, as if the coin buyers were paying Patreon fees to every Peer.
- F. Create the mechanism for activists to convert emails into physical letters, with envelopes appearing to be hand-written and with real stamps...and have them mailed, including to persons not usually reachable via email: SCOTUS justices, representatives in “foreign” districts, oligarch executives & advertisers supporting MAGA, etc.
- G. In regard to the above, and with the help of Peers, the public and coins buyers, establish a large searchable database with contact info of representatives, state & Federal, etc. Potentially, the database could be an app that automatically dials the phone number of those brought up via a search, as well as being the addressing databases for the “snail mail” letters.

- H. Install a mechanism enabling Freedom Dawning Peers to, rather than competing with each other for viewers, collaborate with each other, as well as with B*E*A*N*S Coin buyers. We're talking about a, frankly, "pissed off" community, likely over 40MM people, working to recover the freedom and rights Resident Scump & DOG-E's Muskrat are stealing from us, as opposed to everyone working individually and going in many different directions at once. This can be a collaborative group far larger than the "MAGA base". In this collaboration, it is anticipated that prior efforts at petitions, protests, class action suits, etc, that fizzled for lack of participation because of failure to have this collaboration or the funds to promote these efforts, will not be duplicated because of this in-flux of funds to all Peers. Imagine being able to have petitions & class action suits against our fascist Resident, and even Congress, with 95MM signatures. (A conservative estimate of the total viewers of our Peers YouTube blogs.)
- I. Provide the means for Peers to get commissions for marketing B*E*A*N*S Coffee, and for coins buyers to receive a part of that commission for referring coffee buyers to each Peer the coin owner chooses; as well as receive commissions for referring buyers of the self-help legal program, and for referring potential borrowers for home refurb loans (if rehabs are resold to owner-occupants), church loans, etc.
- J. If possible, provide the mechanism to subscribe each coin buyer as upper level members with all Peers, with coin buyers having the same username and password for all Peers. If not possible, a confidential page will be created containing a list of new coins buyers, and their info, which all Peers will be mandated to periodically check, so they can subscribe to their sites.
- K. Create a site with MAGA-extreme merchandisers and advertisers that support MAGA, Fox News, etc...with alternative product & service providers. (This is just like what was done with Trump, and his sales dropped by something like 70% or more. It's happening now with Tesla, with sales dropping in some Euro countries by more than 60%.) If possible, this facility to allow people to "vote with their wallet" will be a phone app facilitating such choice "on the fly".
- L. Provide a detailed Freedom Dawning network schedule page, with each Peer being able to enter you own schedules. Viewers will be able to search for new content by date and by Peer.
- M. Provide a nationwide schedule for activist protests, seminars, conference calls and so on. Provide Guy Fawkes masks for those who fear being exposed as such protests. (Such masks are legal if the protestor is not breaking the law...whereas, without them, protestors could be ID's & persecuted by MAGA.) The schedule page should include the links to all of the Peers and, if possible, automatically log in coins buyers when they click each Peers link. Technical experts need to advise if, and how, this can be accomplished for YouTube, BlueSky, SubStack, etc.
- N. Gain protection against corrupt DOJ persecution via a significant legal fund intended to fight against attempts to limit the rights of the Peers under the First Amendment of the US Constitution; or persecution by "Red States" for advertising the offshore clinic, etc.
- O. If a Freedom Dawning Peer Board Member, gain the right to have input regarding who will be the custodian of the B*E*A*N*S Card & custodian of the liquidity pool, as well as who will trade that pool. Plus, they will have input regarding how an additional \$11-12MM fund will be allocated between the Peers & otherwise.
- P. Freedom Dawning, itself, will establish various funds to support those suffering under MAGA...including former MAGA voters who now have huge regrets that they were lied to by Trump, who is now "screwing" them (farmers, etc); launch an offshore clinic & an academy for the bulk of hospitality workers that usually find real training unaffordable; etc. At the same time, many Peers that are "running on a shoestring" will be able to improve their operations, hire staff, minimize the time spent begging for contributions, and minimize the chances of becoming beholden to outside entities, etc.
- Q. Work with Indivisible & other such organizations to educate activists in guerrilla political activism, since compromising with MAGA only helps the MAGA agenda of suppressing the proletariat.
- R. Work with experts on worker-owned cooperatives, as well as major lenders, to promote such cooperatives and facilitate worker buy-outs to a level of at least 51% of the enterprises involved.
- S. Work with Quest Funding to facilitate those having problems obtaining loans to start and maintain businesses, rehab homes (to be sold to owner occupants), and over a dozen other funding & credit support services.

This is just the beginning: There are dozens of other potential implementations, and ideas for same will be gathered from Peers, coin owners, and others, and implemented as feasible...whatever it takes to fulfill the Freedom Dawning goal to:

Proclaim Liberty & Defeat Tyranny, while Striving for Universal Brotherhood, Representative Democracy, Peace, Prosperity & Equal Opportunity, Empathy & Respect in an Environmentally Conscious America.
